

<http://127.0.0.1:8000/> now returns the API overview. All available URLs at a glance:

URL	Purpose
http://127.0.0.1:8000/	This overview
http://127.0.0.1:8000/docs	Interactive Swagger UI (test all endpoints)
http://127.0.0.1:8000/api/status	MongoDB health + data counts
http://127.0.0.1:8000/api/weather/{zip}	Weather data for a ZIP code
http://127.0.0.1:8000/api/report/Fisch	AI report for Fisch presenter
http://127.0.0.1:8000/api/locations	All saved locations

The `/docs` Swagger UI is the most useful — you can test every endpoint interactively without needing Postman or curl.
